AIBHS

AI in Biomedical and Health Sciences

UF | Intelligent Clinical Care Center
UNIVERSITY of FLORIDA

The Artificial Intelligence in Biomedical and Health Sciences (AIBHS), a new experiential learning graduate degree program at University of Florida College of Medicine, trains the workforce in healthcare and biomedical sciences to develop and implement trustworthy artificial intelligence technologies, rapidly transforming digital patient care, translational biomedical research, and precision medicine.

AIBHS starting Fall 2026

Artificial Intelligence in Biomedical and Health Sciences

University of Florida

About the Program

Learn to utilize AI in real-world biomedical and clinical settings

AIBHS is an interdisciplinary program, conveniently co-located in Jacksonville and Gainesville, designed to teach students to use trustworthy AI to augment human-centered healthcare and transform critical and acute care medicine.

AIBHS Students can look forward to:
Hybrid Learning (Online & Face-to-Face)
Networking & Collaboration (Jacksonville and Gainesville)
Interdisciplinary Training
Signature Design Studios
Dual Mentorship in AI & Biomedical or Clinical Science

AIBHS graduates are qualified for careers:
Data Scientist
Medical & Health Services Manager
Database Architect
Technical Writer
Computer & information Research Scientist
Health Information Technologist

Job Outlook: AI & Biomedical Science

$95,070
Median salary in Florida

7-35%
Faster than average projected national job growth

$99,213
Median national salary

Data from Florida Department of Economic Opportunity and the U.S. Bureau of Labor i n 2023 , projected job growth and median salary for jobs listed above.

All types of students welcome: Working professionals, traditional graduate students, those pursuing other professional or graduate degrees, etc. are encouraged to apply

Full-time students can graduate in 1½ years

Recommended Background
Foundational biological or medical knowledge (*i.e. biology degree or clinical practice experience*) *and/or* strong computational background (*i.e. computer science, statistics, or engineering*)
Python or R familiarity recommended (*optional*)

Curriculum

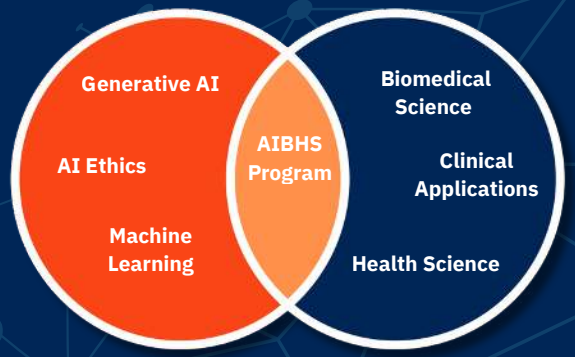
Core courses:
Fundamentals of AI in Medicine I
Fundamentals of AI in Medicine II
Biostatistics for AI
AI Ethics and Alignment in Health

Experiential Learning courses:
AI Design Studio in Health I
AI Design Studio in Health II
Clinical AI Design Studio I
Clinical AI Design Studio II

Experiential Electives:
AI in Medical Image Analysis
Applied Generative AI in Medicine
AI for Clinical Decision Support
AI-Powered Drug Discovery
Supervised Research

Design Studios:
Via AI and Clinical *Design Studios*, students will learn from AI technical experts and biomedical and clinical researchers.

Combining *AI* with *Biomedical & Clinical Sciences*



Traditional disciplines often lack a nuanced focus on biomedical and health-focused AI, while data science generally misses an emphasis on applications for translational biomedical domains and clinical settings.

AIBHS offers community-embedded experiential training, where biomedical and clinical expertise is matched with AI technical, ethical and legal expertise. AIBHS is a holistic program, enabling students to practice and apply AI skills directly into translational biomedical research and clinical settings.

Learn how to accelerate healthcare advancements and improve patient care with a M.S. degree in Artificial Intelligence in Biomedical and Health Sciences.

Meet our Program Director

Azra Bihorac, MD, MS, FCCM, FASN
Program Director
Senior Associate Dean for Research at the University of Florida College of Medicine;
R. Glenn Davis Professor of Medicine, Surgery and Anesthesiology;
Director, Intelligent Clinical Care Center;
Director, Precision and Intelligent Systems in Medicine Partnership
